Engineering Bulletin #008
Proof Roll Requirements

Previously, Beaumont has typically requested proof rolls at three stages:

1. Post cement stabilization
2. Top of gravel prior to concrete
3. Top of gravel prior to asphalt paving

Effective May 2023, only one proof roll will be required with City presence, at the post cement stabilization stage. Additional proof rolls may still be required at various stages at the City's discretion. Geotechnical testing reports for all lifts of gravel and asphalt will still be required with CCC documentation as per standard procedure.

The intent is to improve efficiency for both developers and City staff. Please contact the Engineering team at engineering@beaumont.ab.ca with any questions or concerns.

Yours truly,

Punam Grewal, MSc, P.Eng., PMP
Manager, Engineering & Environment
